8. CONFIGURE ACCOUNT DETERMINATION ..... 9

## 1. INTRODUCTION

The Brazilian government published the Complementary Law No. 214 on January 16, 2025, introducing the new taxes:

- **Contribution on Goods and Services** (CBS)
- **Tax on Goods and Services** (IBS - State and Municipal).

You need to configure these taxes in your systems to comply with this legal change.

### 1.1 Purpose

This document guides you through configuring your system to comply with the new taxes from the tax reform. At this stage, you need to perform manual steps to create the necessary data in the system. After following the procedures in this document, your system can use two of the new taxes, CBS and IBS (State and Municipal), in purchasing documents like purchase orders and invoice receipts.

### 1.2 Disclaimer

SAP delivers configurations for the TAXBRA standard. If any of the configurations delivered do not meet your business requirements, you must make the necessary adjustments.

### 1.3 Notices

- Log in into the system in English.
- The steps contained in this document are post-implementation steps.
- Ensure that the Correction Instructions delivering code changes are properly implemented before proceeding to the next steps.

## 2. DEFAULT SETTINGS DELIVERED BY BC SET

To simplify the implementation process, follow the step by implementing the BC set "Z_TAX_REFORM_ACC_SQNC_MM_<Software Component>" attached to this SAP Note:

- Creation of Access Sequences

The following steps relate to new condition types and processing keys. Implement the BC set "Z_TAX_REFORM_TAXBRA_<Software Component>" attached to this SAP Note:

- Creation of condition types for MM
- Creation of processing keys for FI Postings

The following steps are related to the mapping of the CBS and IBS condition types to the calculation procedures and the nota fiscal. Implement the BC set "Z_TAX_REFORM_TAXBRA_<Software Component>_1", also attached to this SAP Note:

- Mapping of condition types in calculation Procedure for MM
- Creation of NF mapping tax values for MM

Download and apply BC Set:

1. Download the "Z_TAX_REFORM_ACC_SQNC_MM_<Software Component>" file from the Attachments.
2. Open the **SCPR3** transaction.
3. Click the **Upload BC Set** button.
4. Choose the downloaded file from your computer.

5. Click the **green check** button to continue.
6. Click **Goto** .
7. Click **Activation Transaction.**
8. Verify if the name of the BC Set is correct.
9. Choose **Activate BC Set** and press **OK**.
10. Return to the previous page.
11. Click the **Compare with customizing tables** button, then click **Display.**

THE RESULT SHOULD BE: No Differences between the BC Set and the table data.

1. Download the “Z_TAX_REFORM_TAXBRA_<Software Component>” file from the Attachments.
2. Repeat steps above from 2 to 11.

THE RESULT SHOULD BE: No Differences between the BC Set and the table data.

1. Download the “Z_TAX_REFORM_TAXBRA_<Software Component>_1” file from the Attachments.
2. Repeat steps above from 2 to 11.

Follow the values as reference:

New Access Sequences for MM:

Access Sequences

| Access sequence | Description | Access Category | Description |
|---|---|---|---|
| BCBS | Brazil CBS | | |
| IBSM | Brazil Municipal IBS | | |
| IBSS | Brazil State IBS | | |

BCBS, IBSM, and IBSS have the same configuration.
The access sequences are delivered only with the access regarding the condition table 392. To add more access, check the step 4. Configure Additional Access.

Access sequence: BCBS Brazil CBS

Accesses

| No. | Table Number | Description | Requirement | Exclusive |
|---|---|---|---|---|
| 99 | 392 | Country | 312 | ☑ |

**NOTE:**

- **The Requirement must be configured in all accesses to avoid inconsistencies in SD documents.**
- **S4CORE (from 104): The access is delivered with Requirement 312.**
- **S4CORE (103 and 102) and SAP_APPL: The access is delivered without Requirement, and it is necessary to follow the step 3. Configure Requirement Formula.**

Access: BCBS 99 Brazil CBS
Table Number: 392 Country

Fields

| Condition | I/O | Document Structure | Document Field | Description | Const. Value Source | Init | Acces... | Priority |
|---|---|---|---|---|---|---|---|---|

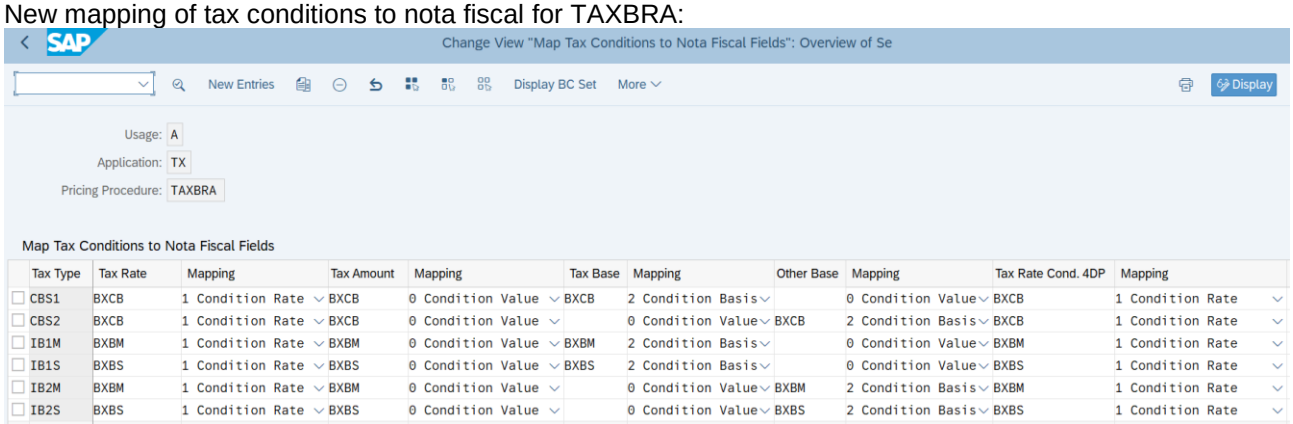
| 694 | 0 | IB1M | 182 | | | 1 | | | VSL |
| 695 | 0 | IB2M | 182 | | | 1 | | | NVV |

**NOTE: The values provided above are suggestions. You can adjust them based on your calculation procedures.**
**Remember that the order in which you implement the conditions is relevant. The values you enter in the "From" column may change depending on your implementation. In the standard configuration, Step 10 relates to BASB condition.**

New mapping of tax conditions to nota fiscal for TAXBRA:



**NOTE: When configuring condition types for tax rates (BXCB, BXBS, and BXBM) to use calculation type W (percentage with 6 decimals), the tax rate value maps to the Tax Rate Cond 4DP field of the Nota Fiscal, leaving the Tax Rate field empty. If you change the calculation type to a value other than W, the tax rate value maps to the Tax Rate field, and the Tax Rate Cond 4DP field remains empty.**

## 3. CONFIGURE REQUIREMENT FORMULA

**NOTE: The following steps are mandatory only for S4CORE (103 and 102 releases) and SAP_APPL (all releases).**

### 3.1 Create Requirement Formula

Follow the steps bellow:

1. Access the **VOFM** transaction.
2. Choose **Requirement** → **Pricing**.

3. Insert the **Routine Number** in the Customer Namespace (600 – 999). Follow SAP Note 156230 for more details.
4. Insert the **Description** value.
5. Make sure the **application** column is empty.
6. Select the current line.
7. Click the **Source text** button to generate the include.
8. Copy the code suggested in the attachment **formula.txt** into *KOBED* form.
9. Save and Active.
10. Return to the previous page.
11. Choose **Edit** → **Activate.**

### 3.2 Change Access Sequences

Follow the steps below:

1. Access the **J1BTAX** transaction.
2. Choose **Condition Setup** → **Access Sequences** → **Access Sequences MM**.
3. Select **BCBS** line.
4. Double-click **Accesses**.
5. In the **Requirement** Column, Insert the formula created in the previous step.
6. Save your changes.

Repeat the steps above for IBSM and IBSS access sequences.

## 4. CONFIGURE ADDITIONAL ACCESS

### 4.1 Create Condition Table

Follow the steps below:

1. Access the **V/03** (pricing Sales/Distribution).
2. Insert the table number in the Customer Namespace (501 – 999).
3. Click Enter.
4. Select the relevant fields.
5. Click the **Generate** button.

### 4.2 Create New Access

Follow the steps below:
1. Access the **J1BTAX** transaction.
2. Choose **Condition Setup** → **Access Sequences** → **Access Sequences MM**.
3. Select **Access sequence** line.
4. Double-click **Accesses**.
5. Click **New Entries**.
6. In **the Access** column, insert the access number.
7. In **Table Number,** insert the condition table from the previous step.
8. In the **Requirement** Column, Insert the corresponding formula.
9. In the **Exclusive** column check the checkbox.
10. Click Enter.
11. Select the current line.
12. Double-click **Fields**.
13. Click Enter.
14. Save your changes.

**NOTE: Formula 312 to S4CORE. Formula from step 3.1 Create Requirement Formula to SAP_APPL**

## 5. CONFIGURE DEFAULT TAX CODE

Follow the steps below:

1. Access the **J1BTAX** transaction.
2. Choose **Maintain MM Tax Codes**.
3. In the **Procedure** field insert TAXBRA.
4. Click the **green check** button to apply.
5. In the **Tax Codes** table, check if exists an empty line.
6. If it does not exist, click **New Entries**.
7. Insert the **Description** value.
8. Save your changes.

**6. CONFIGURE TAX CODE FOR CBS AND IBS**

Follow the steps below:

1. Access the **J1BTAX** transaction.
2. Choose **Maintain MM Tax Codes**.
3. In the **Procedure** field insert TAXBRA.
4. Click the **green check** button to apply.
5. In the **Tax Codes** table, select the desired line (or create a new entry).
6. Click the **Maintain Tax Code Conditions** button.
7. In the **Conditions** table, select the CBS* line.
8. Check the **active** flag.
9. In the **Conditions** table, select the IB*M line.
10. Check the **active** flag.
11. In the **Conditions** table, select the IB*S line.
12. Check the **active** flag.
13. Save your changes.

*Change * to 1 for deductible or 2 for non-deductible.*

**7. CREATE CONDITION RECORD**

SAP does not provide condition records. It is necessary to create at least one condition record for each tax rate condition type of this delivery, according to its legal percentages and validities.

Follow the steps below:

1. Access the **FV11** transaction.
2. In the **Condition Type** field insert BXCB.
3. Click Enter.
4. Choose Key Combination desired.
5. Fill in the required fields according to the Key Combination choose.
6. In the amount column, insert the tax rate value.
7. Save your changes.

Repeat the steps above for BXBM and BXBS condition types.

**8. CONFIGURE ACCOUNT DETERMINATION**

To enable the relevant FI postings in the purchasing scenario, it is necessary to configure the account determination for the new transaction keys.

Follow the steps below:

1. Access the **OB40** transaction.
2. Choose **VSI** line.
3. Insert the **Chart of Accounts** field.
4. Click Enter.
5. Insert the **G/L Account** (to maintain G/L accounts, access the **Edit G/L Account Centrally** (FS00) transaction).
6. Insert required fields according to configured rule.

7. Choose **Posting Key.**
8. Insert **Debit** value.
9. Insert **Credit** value.
10. Save your changes.

Repeat the steps above for VSJ and VSL transaction keys.
