1. INTRODUCTION

The Brazilian government published the Complementary Law No. 214 on January 16, 2025, introducing the new taxes: **Contribution on Goods and Services** (CBS) and **Tax on Goods and Services** (IBS - State and Municipal). You need to configure these taxes in your systems to comply with this legal change.

1.1 PURPOSE

This document guides you through configuring your system to comply with the new taxes from the tax reform. At this stage, you should perform manual steps to create the necessary data in the system.

After following the procedures in this document, your system can use two of the new taxes, CBS, and IBS (State and Municipal), in sales documents like sales orders and billing documents.

1.2 DISCLAIMER

SAP delivers configurations for the RVABRA standard. If some of the configurations delivered do not meet your business requirements, you must make the necessary adjustments.

2. DEFAULT SETTINGS DELIVERED BY BC SET

Steps to upload and activate BC Sets:

1. Go to Transaction SCPR20.
2. Click the BC Set option and select **Upload**.
3. Choose the BC Set files from either point 2.1 or 2.2. Ensure you select the correct Software Component.
4. Upload and activate the BC Sets, following the implementation order specified in topics 2.1 or 2.2.
5. Click **Activate BC Set**.
6. Repeat the process until all BC Sets are activated.

2.1 S4CORE

Z_TAX_REFORM_ACC_SQNC_SD_S4CORE_1.bcs
Z_TAX_REFORM_RVABRA_S4CORE_2.bcs
Z_TAX_REFORM_RVABRA_S4CORE_3.bcs

2.2 SAP_APPL

Z_TAX_REFORM_ACC_SQNC_SD_SAP_APPL_1.bcs
Z_TAX_REFORM_RVABRA_SAP_APPL_2.bcs
Z_TAX_REFORM_RVABRA_SAP_APPL_3.bcs

3. CONFIGURATION STEPS FOR THE NEW TAXES

The settings mentioned in this topic are the ones required to enable the new taxes.

Note that some configurations are delivered within the BC Set attached in the SAP Note. In case you have already activated the BC Set, some of these configurations may already be available in your system.

3.1 CREATE CONDITION TABLE (Optional)

Initially, to implement the new taxes, we recommend you use the existing condition table 392, which considers only the country as condition. You can verify if it exists in your system or create a new condition table configured as your business rules.

To create a new condition table, access the **Create Condition Table (Pricing Sales/Distribution)** (V/03) transaction, fill in the condition table number and configure it according to your needs.

To view an existing condition table, you can access the **Display Condition Table (Pricing Sales/Distribution)** (V/05) transaction and fill in the condition table number.

3.2 CREATE ACCESS SEQUENCE (Optional)

This SAP delivery includes three new access sequences for the new taxes: BCBS, IBSS, and IBSM. These sequences use access number 99, condition table 392, and are checked as exclusive. Their access sequences fields use condition ‘ALAND’ with constant value source as BR.

To view or create new access sequences, you can access the **Display View “Access Sequences”: Overview** (V/07) transaction.

3.3 CREATE ACCOUNT KEY (Optional)

This SAP delivery includes three new account keys for the new taxes: MWC, MWD, and MWE. The account key IDs follow the sequence logic of our last delivery.

To maintain account keys, you can access **Change View "Account Key": Overview** (OV34) transaction.

3.4 CREATE CONDITION TYPE (Optional)

SAP delivers three new condition types to accommodate new taxes: CBS3, IB3S, and IB3M

To maintain condition types, you can access **Change View "Conditions: Condition Types": Overview** (V/06) transaction. When configuring the new taxes, pay attention to several configuration points, such as:

a. Access Sequence*
b. Condition Class: D (Taxes)
c. Condition Type: W (Percentage with 6 decimal places)
d. Condition Category: D (Tax)
e. Group Condition – Manual Entry: D
f. Group Condition – Item Condition: checked
g. Group Condition – Amount/Percent: checked
h. Group Condition – Value: checked

Note on the access sequence: for each condition type, use the respective access sequence created, as per the table:

Condition Type	Access Sequence
CBS3	BCBS
IB3S	IBSS
IB3M	IBSM

3.5 CREATE CONDITION RECORDS (Required)

SAP does not deliver condition records because this data may vary based on customers' business needs. You should create at least one condition record for each condition type of this delivery, according to its legal percentages and validities. It is also important to specify the Tax Code for accounting and reporting purposes.

To create a condition record, access the **Create Condition Records** (VK11) transaction. Enter the condition type's ID and fill out the table with values such as country, amount, unit, and validity.

3.6 ADJUST PRICING PROCEDURE (Optional)

To configure the RVABRA pricing procedure for new taxes, ensure the Net Base line appears after the Price and Discount (Value) line. Create a new line for use as the Net Base Reference. Add this line after the discount and freight lines (after the ICMI and before the IBRX line). Configure it as statistical and use the Net Base line's value as a reference (from step). Finally, configure the new taxes in the RVABRA pricing procedure. Add them, preferably, after the IBRX line, with the account key defined and based on the value range between the Material (K004) and Net Base Reference steps, as shown below.

Procedure: RVABRA Brazil: Standard CBT

624	0	BX20	BR IPI Normal Base					☑					320				
626	0	BX21	BR IPI Excluded Base					☑					320				

To maintain the pricing procedure, you can access **Change View "Procedures": Overview** (V/08) transaction, find and select RVABRA in the list and click in Procedure – Control Data in the tree.

Note: Although there are four new taxes, we are delivering three condition types. These are the taxes that will have initial validation for 2026. Since the IS tax comes into force in 2027, it will be included in a future delivery.

3.7 CREATE ACCOUNT SETTINGS (Required)

To enable the relevant FI postings / Journal Entries in the Sales scenario, configure the following settings:

a. **Processing Key**
   SAP delivery assigns a processing key to each new tax, similar to the account key configuration. These keys include MWC, MWD, and MWE.

   You can maintain processing keys accessing **Change View "Tax Processing in Accounting": Overview** (OBCN) transaction.

b. **G/L Account**
   Create new G/L accounts tailored to your company's needs for the new taxes. To maintain G/L accounts, access the **Edit G/L Account Centrally** (FS00) transaction.

c. **Account Determination**
   Create new account determinations to be used to the new taxes. To create account determinations, you can access **View Cluster Editing: Initial Screen** (SM34) transaction and enter VC_T030K (Tax Accounts) view cluster.

3.8 MAINTAIN MAPPING CUSTOMIZING VIEW (Optional)

You must update the **SD Tax Conditions in Nota Fiscal Fields** (J_1BNFTXCONDV) view to include the new taxes.

To maintain this view, you can access **Table View Maintenance: Initial Screen** (SM30) transaction and enter J_1BNFTXCONDV (SD Tax Conditions in Nota Fiscal Fields) view.
